Definitions

Note: In order to protect against disclosure of personal information, some Census records are swapped between different geographic areas. Some values will be affected, particularly small values at the most detailed geographies.

1. Key Statistics – *Household*: is one person living alone; or a group of people (not necessarily related) living at the same address who share cooking facilities and share a living room or sitting room or dining area. A *communal establishment* is defined as an establishment providing managed residential accommodation. Managed means full-time or part-time supervision of the accommodation for example, prisons, large hospitals, hotels, student halls of residence.

2. Age structure – Age is derived from the date of birth question and is a person's age on 27th March 2011. Dates of birth that imply an age over 115 were treated as invalid. Infants less than one year old were classed as being 0 years of age. Individual years and gender breakdown for Community Council areas are available on request.

3. Household composition – The figure for '1 adult plus children' may include a small number of households with no adults.

4. Household tenure – Tenure provides information about whether a household rents or owns the accommodation that it occupies and, if rented, combines this with information about the type of landlord who owns or manages the accommodation. *Owner occupied*: covers owned outright, owned with mortgage or loan and shared ownership, part owned and part rented. *Private rented*: includes rented from a private landlord or letting agency, employer of a household member, relative or friend of a household member, or other non-Social rented.

5. House type – *Terraced*: covers end-terrace. *Part of a converted or shared house*: includes bed-sits. *Other*: includes caravan or other mobile temporary structure.

6. Household size by number or rooms – Occupancy rating provides a measure of whether a household's accommodation is overcrowded (too few rooms per resident) or under-occupied. It compares the actual number of rooms available to a household and a notional measure of the number of rooms required given the number, age and relationships of the people in the household.

7. Car availability – The number of cars or vans owned, or available for use, by one or more members of a household. It includes company cars and vans available for private use.

8. Travel to work – Method of travel to work is defined as the method used for the longest part, by distance, of usual journey.

9. Long-term health condition – lasted or expected to last at least 12 months.

10. Ethnic composition/ Religion – *Ethnic group* classifies people according to their own perceived ethnic group and cultural background. *Religion* is a person's current religious denomination or body that they belong to. No determination is made about whether a person was a practising member of a religion

11. Economic activity – relates to whether or not a person aged 16 and over was working or looking for work in the week before the census. Rather than a simple indicator of whether or not someone was currently in employment, it provides a measure of whether or not a person was an active participant in the labour market.

12. Employment by industry – The industry in which a person works relates to their main job and is derived from information provided on the main activity of their employer or business.

13. Country of birth – The grouping of countries within the classification is broadly regional, but takes into account the grouping of European Union (EU) countries. Countries in the EU are grouped into those that were EU members in March 2001, and those that became members (accession countries) between April 2001 and March 2011 as part of the EU enlargement process.

14. Health/ Limiting condition – *General health* is a self-assessment of a person's general state of health. People were asked to assess whether their health was very good, good, fair, bad or very bad. This assessment is not based on a person's health based over any specified period of time. *Limiting condition* – is defined as day to day activities being limited because of a health problem or disability which has lasted, or is expected to last, at least 12 months. This includes problems that are related to old age. People were asked to assess whether their daily activities were limited a lot or a little by such a health problem, or whether their daily activities were not limited at all.

15. Occupation – A person's occupation relates to their main job and is derived from either their job title or details of the activities involved in their job.

16. Qualifications – Highest level of qualification achieved. Level 1: 0 Grade, Standard Grade, Access 3 Cluster, Intermediate 1 or 2, GCSE, CSE, Senior Certification or equivalent; GSVQ Foundation or Intermediate, SVQ level 1 or 2, SCOTVEC Module, City and Guilds Craft or equivalent. Level 2: SCE Higher Grade, Higher, Advanced Higher, CSYS, A Level, AS Level, Advanced Senior Certificate or equivalent; GSVQ Advanced, SVQ level 3, ONC, OND, SCOTVEC National Diploma, City and Guilds Advanced Craft or equivalent. Level 3: HNC, HND, SVQ level 4 or equivalent. Level 4: and above: Degree, Postgraduate qualifications, Masters, PhD, SVQ level 5 or equivalent; Professional qualifications (for example, teaching, nursing, accountancy).

17. Provision of unpaid care – A person is a provider of unpaid care if they look after or give help or support to family members, friends, neighbours because of long-term physical or mental ill health or disability, or problems related to old age. This does not include any activities as part of paid employment. No distinction is made about whether any care that a person provides is within their own household or outside the household, so no explicit link can be made about whether the care provided is for a person within the household who has poor general health or a long-term health problem or disability.

18. Approximate Social Grade – Social grade is the socio-economic classification used by the Market Research and Marketing Industries, most often in the analysis of spending habits and consumer attitudes. The Market Research Society (https://www.mrs.org.uk/cgg/social_grade) has developed a method for using census information to provide a good approximation of social grade. The concept of a *Household Reference Person* (HRP) was introduced to replace the traditional concept of the 'head of the household'. HRPs provide an individual person within a household to act as a reference point for producing further derived statistics and for characterising a whole household according to characteristics of the chosen reference person.
